

Individual Responsibility Document

System: Clinic Appointment Application

Assignment type: Individual. Student ID and name: TBD. Replace these placeholders with the actual details.

1. Responsibility Summary Table

No.	Student ID	Student Name	Assigned Feature	Primary CRUD / Responsibility
01	TBD	TBD	Clinic Appointment Application	Individual end-to-end responsibility for authentication, Doctor CRUD and image upload, Appointment CRUD and status changes, overlap validation, mobile/API integration, deployment, and documentation.

2. Detailed Responsibility Breakdown

2.1 Requirements and Planning

The student is responsible for confirming the approved topic, defining the application scope, identifying required entities and API behaviors, and planning implementation milestones.

2.2 Design

The student defines the User authentication model, Doctor primary entity, Appointment related entity, REST endpoint contract, mobile navigation, and appointment-overlap business rule.

2.3 Implementation

The student implements registration and login with bcrypt password hashing and JWT authentication; Doctor create/read/update/delete and validated image upload; Appointment create/read/update/delete and cancellation; ownership checks; and validation that rejects past times and overlapping active appointments for the same doctor.

The student also implements the Expo mobile interface, form validation, loading/error/empty states, API integration, database configuration, and deployment setup. Any additional contribution should be recorded only if it was actually completed.

2.4 Verification

The student is responsible for manually verifying registration and login, protected-route behavior, Doctor CRUD and image upload, Appointment CRUD and cancellation, ownership restrictions, and overlapping-time rejection against the configured API. Report only checks that were actually performed.

3. Confirmation

This document is a draft responsibility summary for an individual assignment. Replace TBD fields and ensure the final statements accurately describe the student's own work. Lecturer topic approval and the required submission format must be confirmed.
